Navidrome

Navidrome is an open source web-based music collection server and streamer. It gives you freedom to listen to your music collection from any browser or mobile device. It's like your personal Spotify!

Installation

> Do note, media directory cannot be changed in Navidrome's UI post-installation. If not specified during installation, `home/username/media/Music` will be used as the default media directory. Should you want a different media directory location, you can specify it during the installation. You can change the media directory of an existing installation by executing `app-navidrome upgrade -d /path/to/other/directory` via SSH.

- Install Navidrome from the **Installers** tab on the User Control Panel. Make sure to choose a strong password.
- Once the installation has been completed, you can access the Navidrome web UI from the **Apps** tab on the UCP.
- Log in with the credentials you set during the installation.

- If you did not specifically set a custom media directory during installation, all music data present in `~/media/Music` will be scanned and available for streaming.

Helpful Information

Configuration File

- The Navidrome configuration file is located here: `~/.apps/navidrome/navidrome.toml`
- It has the following settings:

```
MusicFolder = "/home/your_username/media/Music"
ScanSchedule = "@every 24h"
LogLevel = "info"
```

- You cannot change Music Folder by editing the path in the config file. To change it you would need to upgrade or re-install Navidrome and specify the path by appending `-d /path/to/other/directory` to the install/upgrade command.
- For more options, please visit the Navidrome documentation page.

Upgrade and Repair

- You can upgrade and repair Navidrome from the **Apps** tab on the UCP, or by executing the following command:

```
app-navidrome upgrade
```

- Or, if you want to set a new media directory:

```
app-navidrome upgrade -d /path/to/other/directory
```

- The execution time of the command can take up to 1-2 minutes, be patient.

Uninstall Navidrome

- To uninstall Navidrome, go to the **Apps** tab on the User Control Panel, or run the installation script again with the following SSH command:

```
app-navidrome uninstall
```

- Wait for uninstallation to complete.
